Assignment No. 01

Interactive Event Management Web App

Technologies Used

- HTML5
- CSS3
- JavaScript

Features Implemented

HTML Structure

- Header displaying "Event Horizon"
- Event display section
- Event addition form
- Footer with student information

CSS Styling

- Responsive design
- Card-based event layout
- Hover effects
- Different styling for past and upcoming events
- Grid layout

JavaScript Functionality

- Display predefined events
- Add new events dynamically
- Form validation
- Delete events

- Search functionality
- Automatic date sorting
- Highlight past events

Working

The application loads predefined events when the page starts. Users can add new events using the form. The application validates input fields before adding events. Events are automatically sorted according to date. Past events are highlighted with a gray background. Users can search events by name or date and remove unwanted events using the delete button.

Conclusion

The Event Management Web App successfully fulfills all assignment requirements. It demonstrates practical use of HTML, CSS, JavaScript DOM manipulation, responsive design, event handling, and dynamic content management.
